**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A receiver for receiving and efficiently separating a composite 3-G wireless communications signal into [its] constituent base-band components, wherein said receiver combines multiple processing tasks of a [conventional] 3-G receiver into a single [entity] device, said single [entity] performs the processing required for multiple channels [in a single device], comprising,

a resampling polyphase filter bank [wherein] for performing tasks of spectral translation, bandwidth reduction and of interpolation to change sample rate by a rational ratio [are embedded], and

a single polyphase filter coupled to operate[s] in a resampling mode so that the sample rate input and the sample rate output [sample rates] are different.

3 (Currently Amended) A receiver for receiving and  
Efficiently separating a composite 3-G wireless communications  
signal into [its] constituent base-band components, wherein said  
receiver combines multiple processing tasks of a [conventional]  
3-G receiver into a single [entity] device, said single [entity]  
device performs the processing required for multiple channels[in  
a single device], comprising,

a filter for changing [the] a sample rate therewithin to  
induce spectral aliasing of multiple spectral centers, and  
[wherein]

a resampling mode for intentional aliasing [is invoked as a  
replacement for the input down conversion of each channel in a  
conventional receiver structure].

4. (canceled).

5. (canceled)
